Why you are interested in working as a programmer on the LITS Web Team?

First of all, coding is my hobby. It's my way of expressing interesting ideas and communicating with the world. I feel very excited and happy when I write codes, and I can spend my whole day doing it. Secondly, I believe the most beautiful part of coding is that it can improve people's life in its own way. By joining the LITS Web Team, I would have the opportunity to use my coding skills to solve technology problems for the MHC community. What's more, being in a web team is a great opportunity for me to explore the technology area and decide my future career path.

Programming and/or web experience

1. Participated in the T-Spark Summer Program held by Tencent in August 2020, and led a team of three to launch a WeChat Miniprogram called Carbon Book using HTML, CSS, JavaScript. This program aims to promote low carbon living style to mitigate climate change by analyzing the carbon footprint of users' and give out recommendations. Despite of coding skills, also learned about product design and user experience design.
2. Co-leader of the Product & Tech Team of Tech4Good student organization. In April 2021, led a team of six to develop an online platform for Non-government Organizations using HTML, CSS, JavaScript. This program aims at connecting NGOs with students to promote voluntary activities. NGOs can post activities information on the platform, and students can sign up for voluntary work. Mainly responsible for project management and front-end development. Gained rich experience in cooperating with other programers on a single project.
